APPLIED MATHEMATICS AND COMPUTATION

VOLUME 61

M. M. A. El-Sheikh and R. A. Sallam
On the Oscillatory Behavior of Solutions of Second Order Differential Equations 1

V. Lakshmikantham, S. K. Sen, and S. Sivasundaram
Concise Row-Pruning Algorithm to Invert a Matrix 17

Ioannis K. Argyros
A Convergence Theorem for Newton-Like Methods under Generalized Chen-Yamamoto-Type Assumptions 25

Qin Sheng and Ravi P. Agarwal
Nonlinear Variation of Parameter Methods for Summary Difference Equations in Several Independent Variables 39

Firdaus E. Udwadia and Ravi Kumar
Convergence of Iterative Methods for Nonclassically Damped Dynamic Systems 61

H. M. Srivastava
Orthogonality Relations and Generating Functions for the Generalized Bessel Polynomials 99

Miroslav Morháč
An Error-Free Levison Algorithm to Solve Integer Toeplitz System 135

Jun Ji
An Alternative Limit Expression of Drazin Inverse and Its Application 151

Pavel G. Todorov and John H. Hubbell
On the Epstein–Hubbell Generalized Elliptic-Type Integral 157

Richard L. Patterson and David Snyder
A Numerical Model for Tracking Populations through a Time-Dependent Stochastic Network 163

M. Muraskin
Irregular Oscillations and Mathematical Aesthetics 183

Drumi Bainov, Zdzislaw Kamont, and Emil Minchev
On First Order Impulsive Partial Differential Inequalities. 207

Yukio-Pegio Gunji
Autonomic Life as the Proof of Incompleteness and Lawvere's
Theorem of Fixed Point 231

Han Guoqiang and Zhang Liqing
Asymptotic Error Expansion of Two-Dimensional Volterra
Integral Equation by Iterated Collocation 269

Jean-Jacques Boreux and Lucien Duckstein
A Fuzzy Approach to the Definition of Standardized
Visibility in Fog. 287

K. J. Bunch and R. W. Grow
A Difference Equation Model of Partial Series 301

Volume Contents
